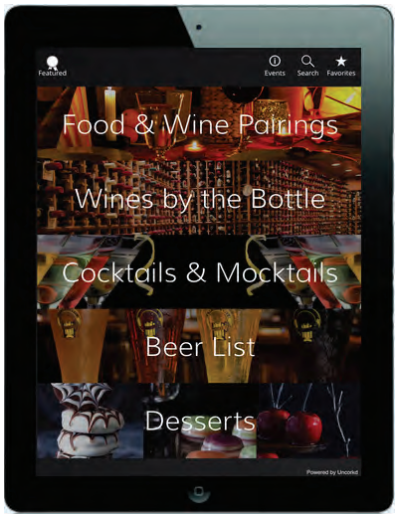
INCREASE BEVERAGE SALES

Create an experience while increasing efficiency



Traditional wine lists make it difficult

for diners to confidently find a selection, making the process of selecting wine intimidating. As a result, many customers don't order wine or select something with a low price. Uncorkd digital menus engage customers with tasting notes, images, featured items, and pairing recommendations that result in guests spending more money and ordering more wine and beverages.

For your establishment, you'll spend less time working on your menu and printing, because all your menus sync in real-time with a few clicks on the computer. Your wait staff will be better trained with beverage infromation readily available and they'll have tools for upselling at their fingertips.

"Customers love them and we've seen great increases in sales in all locations on items that weren't moving as much before."

F&B Director
Ri Ra Group of Companies
